Pocket AI with camera, Rev B: every connection on one sheet

A dot is a joint. A line that hops over another does not touch it. Thick = bare rod, or one of the five wires that cross the two joints. Thin = resistor or capacitor leg.
Ground symbols: power grounds to the holder's − lead, signal grounds to the XIAO's GND pin. No 5 V rail exists.

Rev B, drawn 2026-11-10, verified on paper against the Seeed wiki, the MAX98357 datasheet and the vendor listings. Not built. The pin audit, the ladder audit and the line-clearance check in gen/wiring_board.py pass.
