Pocket AI paper mock-up · page 1 of 2 · parts at 1:1 (A4)

Print at 100 % / Actual size, A4, no “Fit to page”. Glue the sheet onto thin card, then cut on the solid lines.

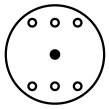

SET 1 · arrangement A (flat, one layer)

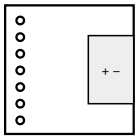

A1 22 × 18
socket sticks out 1.7

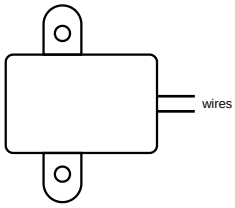

OLED 27 × 27

mic Ø13
hole: centre, side away from can

amplifier 17 × 17
terminal block on this edge

speaker 20 × 13
21 across the flanges

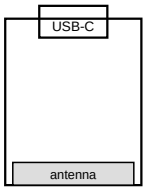

button 5 × 5

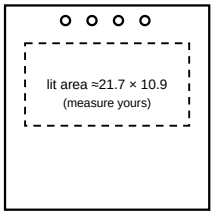

your USB plug
redraw at your W × H

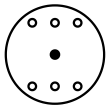

SET 2 · arrangement B (stacked, two layers)

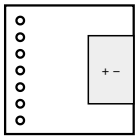

A1 22 × 18
socket sticks out 1.7

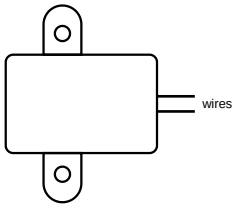

OLED 27 × 27

mic Ø13
hole: centre, side away from can

amplifier 17 × 17
terminal block on this edge

speaker 20 × 13
21 across the flanges

button 5 × 5

your USB plug
redraw at your W × H

SCALE CHECK: the ruler must measure exactly 100 mm and the square 10 × 10 mm. If not, reprint at 100 % / Actual size.

10 mm square

How to read the lines

——— solid = measured with calipers (28 Sep); cut on it

- - - - - - - short dashes = estimate, still to measure (OLED lit area, your USB plug); redraw once measured

Heights are not shown: the tallest part is the amplifier, 18 mm with pins. Both sets are identical; one is for each arrangement.

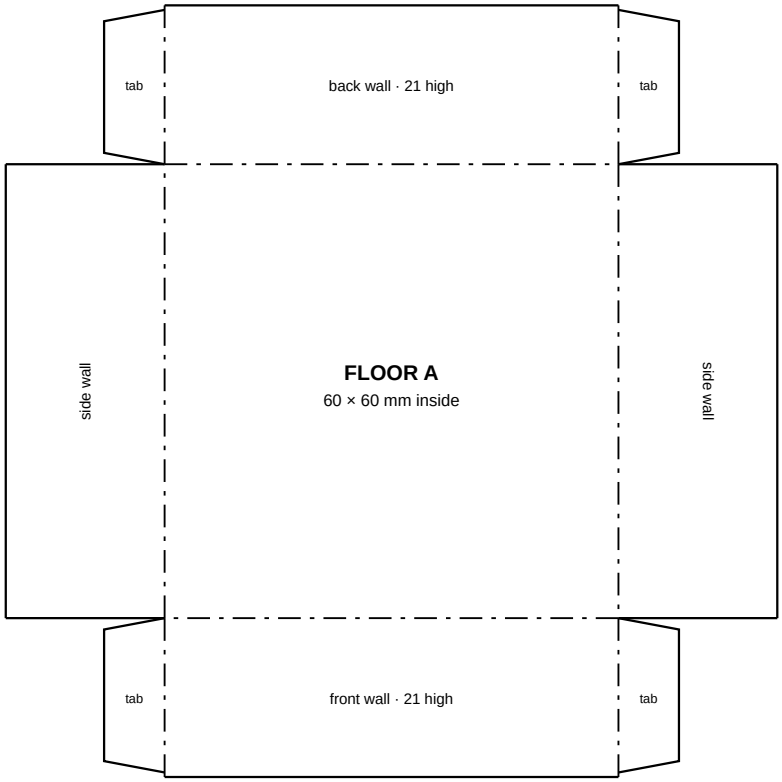

Every layout must keep: the antenna end of A1 at an outside edge · a thin USB wall or plug hole with room to bend · 2–3 mm around every part for wires.

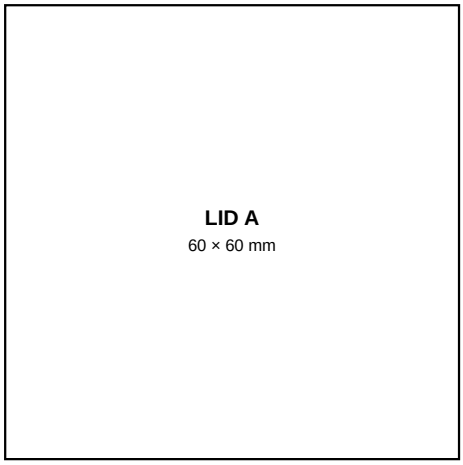

Pocket AI paper mock-up · page 2 of 2 · boxes at 1:1 (A4)

Lay the parts out first. Only then cut the box for the arrangement you keep; if your layout is bigger, redraw the floor with 2–3 mm margin.

cut fold up (score lightly with the back of the knife first)

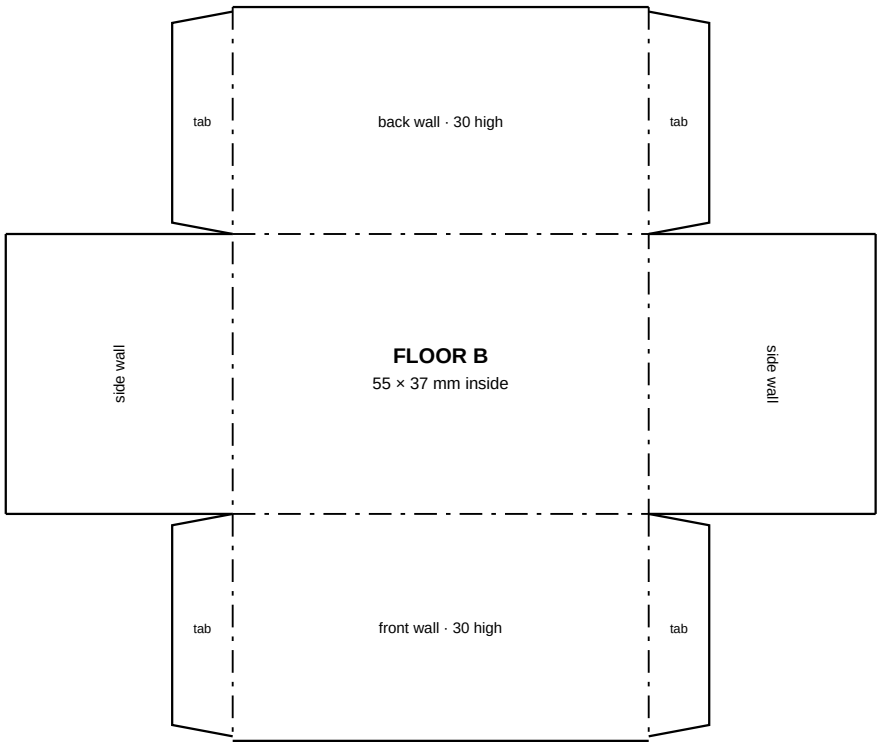

BOX A · flat · ≈ 55 × 55 parts + margin, walls 21 = amplifier with pins + 3

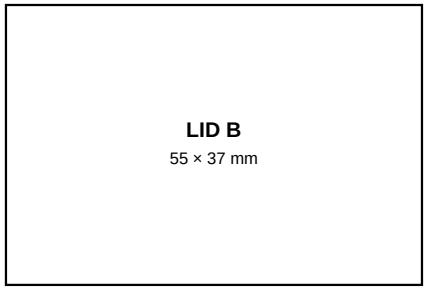

tape on after the test fit

BOX B · stacked · ≈ 50 × 32 parts + margin, walls 30 (trim to 25 if it fits)

tape on after the test fit

Assembly: fold the four walls up, fold each tab inward and glue it behind its side wall. Then mark and cut the openings on the walls and lid where your parts actually sit: USB (thin wall or plug hole), screen window = lit area, speaker grille, mic hole, button.

Sizes are first estimates from cardboard-mockup.html; the paper model checks space only, not radio range. MOCK-01: send the outside L × W × H.
